

MAY 2017

PLACE OF TRANQUILITY

Acrylics 50 x 50 cm

Green, the colour of repose, of calmness and inner peace, has a neutral and balancing effect in our fast moving world. It is also the colour of the fairy tale world, of unreal fantasies and timeless dream world. Any chaos will eventually calm down in this colour and any madness will lose its horror, and one will get used to it because the values alter and adjust themselves. Green is mediocrity and negates ingenuity; ignorance is closer to it.

Green is the colour dress code of our planet, green in its many shades is the poetry of spring and we link it to nature, naturalness, healthy way of living and stern Eco Gurus in the cities. Green as a way of living, like a religion, a political business or a healing method brings new radiance to an often despised colour.

But let us abandon polemics and stroll into the green countryside to take a deep breath and to enjoy the green with full serenity wherever it appears.
